

Create a program that asks the following question:

**“What is your favorite animal?”**

You (or the user) will type an answer to the question and press “Enter”.

Assume the user has entered “Pangolin”. Then the program will print the following two lines.

**How about that!**  
**The Pangolin is my favorite animal too!**

You must observe the following requirements as well.

1. The program must begin with a comment block in the following format.

```

////////////////////////////////////
// Name: Peter M. Maurer
// Program: Animal Planet
// Due: Aug. 31, 2007
////////////////////////////////////

```

The words “Name” “Program” and “Due” are required. The comment block must be followed by a blank line.

2. Your program must have a blank line at the end.
3. Your program must return a zero.
4. Your program must have at least two comments describing what is going on.

**NOTE: If your submitted program does not compile, you will receive a zero for the assignment.**
